

Manage Test Booklet

Security Number Lists

Manage Security Number Lists

Each year, Assessment departments receive countless test booklet security number lists. Because the lists are not expanded, security numbers for individual booklets are not readily available.

iTrackSTAAR is an effective way to manage test booklet security number lists, expand lists to show individual items & associate “D” lists.

Auto-Expand Lists to View Unique Security Codes

Auto-Expand Security Number Lists

Test booklet security number lists show ranges of security numbers rather than numbers for individual items. This factor alone significantly complicates the task of maintaining accountability of booklets.

With iTrackSTAAR, test booklet security number lists are auto-expanded so that security numbers are readily available for individual items. Each campus and testing administrator can easily view a list of security numbers for assigned booklets.

Campus and District administrators can also view an online history of each booklet’s location.

Associate “D” Lists

During each testing cycle, district’s receive multiple “D” lists of test booklets that may need to be expanded and associated with other test booklet security number lists.

With a few simple clicks, you can upload and associate test booklet security number lists in iTrackSTAAR. The lists are auto-expanded to show unique items during the upload process.

Once test booklet security number lists are associated, you can compare items scanned at the central office or any campus with the associated lists as well as track individual items.
