Scan Test Booklet

Security Numbers

Flexible, Easy to Use Interface

ITrackSTAAR is extremely easy to implement. Because the system is web-based, it is not necessary to install software on individual computers and you can track booklets from any location that has internet access.

Scanners are "plug & play" and are compatible with both PC and Macintosh machines. Cordless scanners facilitate high volume scanning of security numbers at the central office.

Compare Items with Test Booklet Security Number Lists

Scan Security Numbers Into System

Login to iTrackSTAAR from any computer that has internet access and scan test booklet security numbers directly into the system.

Scan location and user name are auto-populated based on the login id of the person that performs the scan & security numbers are automatically compared against the district's Test Booklet Security Number Lists.

Data from scans is available immediately.

Upload Lists of Security Numbers

If the location or computer at which you are scanning booklets does not have internet access, simply save the list of scanned test booklet security numbers.

Later, you can upload the list from any computer that has internet access. iTrackSTAAR will process the test booklet security numbers exactly as if they were scanned directly into the system.

Data from uploads is available immediately.
