# Dashboard

## About the Dashboard

iTrackSTAAR provides educators with a tremendous amount of data about inventory items. The Dashboard presents this data to Campus and Central Office Administrators in “clickable” format. By clicking items on the Dashboard, administrators can quickly and easily drill-down through data and view detailed information about items.

## Dynamic Data for Campus & District Coordinators

### Inventory Dashboard

The Inventory Dashboard shows data for a specific location within the district such as a Campus or the Central Office. At the top level, the Inventory Dashboard gives a snapshot of assigned items, scanned items, missing items etc. Subsequent levels show additional details about clicked items.

By making a selection from the Master List: drop-down, a Campus or Central Office administrator can display data for a specific testing cycle.

**Call and schedule a free demo today!**

### System Dashboard

The System Dashboard is specifically for Central Office administrators and gives an overview of all inventory items for the entire district.

At the top level, the System Dashboard shows a summary of each item type and any missing items. Subsequent levels show how booklets are distributed.

By clicking items on the System Dashboard, Central Office administrators can view lists of security codes for each item type and category.
